General Enhancements

Crystal Reports

The program now outputs Short Description for answers of 'Part Filter' Type Options (Options with real parts as answers) e.g. Door Slabs, Glass Inserts, Profile (Part Filter). Earlier it used to output Stock No., making customer documents less informative.

Database Schema Changes

Changes specific to database tables:

Table	Column	Change
WMCustomer	DefaultLineSpecification (XML)	Added for storing details of default options-answers and glazing.
WMStockHeader	Rack	Created an index idxWMStockHeaderRack on WmStockHeader.Rack

Issues resolved

Order Entry | Sales Line - 1975064

The problem with incorrect pricing being stored on a sales line on 'drag and drop' copy of sales line item on another sales line such that both sales lines have different extras category applicable to them (or no extras) is now resolved.

Order Entry | Property Sales line - 1974846

The problem with the program reflecting recalculated prices on adding a property rather than the actual prices stored on the property is now resolved.

Customer | Standard Products - 1973944

The problem of incorrect storage of grid (Georgian) information in some cases is now resolved. This has earlier resulted in the Grid changing when reopening a Standard Product as compared to what was saved.

Remakes - 1974616

Creating Remake Order using a design having 1/4-1/2-1/4-dimension split was not working correctly. This is now rectified.
