---------------------------------------	---

Windowmaker 2026 R3.1.0

General Enhancements – Windowmaker Web

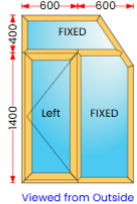

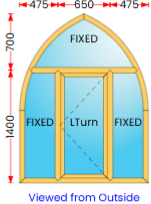

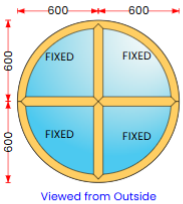

Flag Windows/Doors

Windowmaker Web now allows to create the Flag shapes - left, right and two-sided flag bays/bows. They can be selected from the shape picker, and support unequal-HaFFL.

Item ID	Location	Diagram	Size	Description	Quantity	Price
0004	W4/Living Room		1800w x 1600h	1-OFF	1	2,664.37
0005	W5/Bedroom 1		1300w x 1600h	Bay 2 Facet	1	2,655.46

1-OFF Designs – Shaped Sales Lines

Windowmaker Web now supports 1-OFF designs on angled and arched heads, circles, ovals and flag designs. Users can create, edit and Match Design, consistent with the features in Windowmaker.

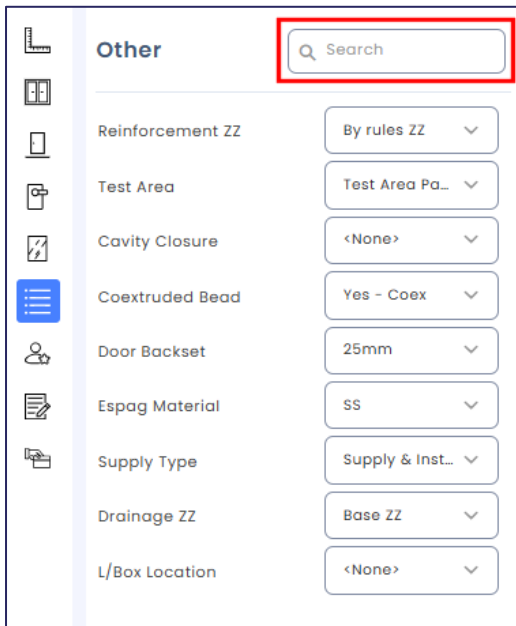

Item ID	Location	Diagram	Size	Description	Quantity	Price
0001	W1/Living Room		1200w x 1800h	Casement F/L.F	1	347.24
0002	W2/East Wall		1600w x 2100h	1-OFF	1	1,961.44
0003	W3/West Wall		1200w x 1200h	1-OFF	1	177.39

Sales Order – Direct Creation

Windowmaker Web now allows a Sales Order to be created directly, rather than always requiring a Sales Quote to be converted to an Order first. This improves the efficiency e.g. to create trade orders or test features that applies only to orders like machinery links, optimisation results etc.

Order Entry, Global Changes – Options List

A new Search button has been added to the options list. This is available at order entry and on the Global Changes screen in Windowmaker Web. This makes it faster to find any specific option. The Global Changes screen in Windowmaker Web now also has a show all options facility. This helps e.g. to apply an option and its answer which is not applied to any of the selected lines say foil colour.

Global Changes

Glass Selection – Costhead Filter

The glass selection view in Windowmaker Web now shows the Costhead description alongside its ID. A new multi-select Costhead filter row combines with the existing Type/Patterned/Security filters. This helps to quickly select a glass from e.g. one of the two preferred suppliers.

210	6mm Tinted-1/4-6mm Clr	104	Double Glazed	3/4		✓	2.73

Users – Limits Tab

Windowmaker Web now provides the Users – Limits tab. This lets administrators control a user's department, site, order type and region access, and sales-header visibility. Status-change restrictions, and discount and commission limits can also be set directly in Web.

Restrict change from status

Sales Quote: Sales Order:

Manufacturing Notifications – Errors and Warnings

Manufacturing errors and warnings are now shown via a 'more' button in the Web notification list. It opens a read-only pop-up instead of the previous manufacturing-failed text.

Shaped Sales Lines – Affect Outer Adjacent Level

The 'Affect Outer Adjacent Level' facility is now available for shaped Sales Lines. This is in line with its existing behaviour on rectangular ones. This helps e.g. to automatically calculate operations on frame profiles aligning with an operation at say 100 mm from the start of the sash profile.

Notes: This facility is not available for:

- Curved profiles
- Frame to overall level profiles

Enhancements to Options – Windowmaker Web

Custom Fields

Custom Fields – formerly User Defined Fields (UDFs) - are now supported in Windowmaker Web.

- Customer, Sales Header and Sales Line grids now show Custom Field values.
- 'Custom Fields' tab lets users view and edit the configured fields.
- Administrators can set up Custom Fields from Administration | Settings: Custom Fields section.
- Group fields to improve efficiency e.g. Architect, Freight
- Drag fields up or down to change their sequence within a group.

Notes:

- For APIs, Custom Fields of type Lookup must now send the exact option value, instead of option ID. Note that the values are case-sensitive. e.g. for "2": "West" the lookup value must be "West" instead of "2" earlier - see screenshots. Refer [Windowmaker Web API documentation](#) for details.
- Existing Customer, Product, Sales Header and Sales Line User Defined Field data is converted and available in Windowmaker Web after upgrading to this release. Currently Custom Field values on Products can only be specified from Windowmaker Cloud; they are not yet available in Windowmaker Web.

Now

User Defaults

Windowmaker Web now applies the User Defaults configured in Windowmaker. This means option answers and other defaults set up centrally are honoured in Web as well.

General Enhancements – Windowmaker

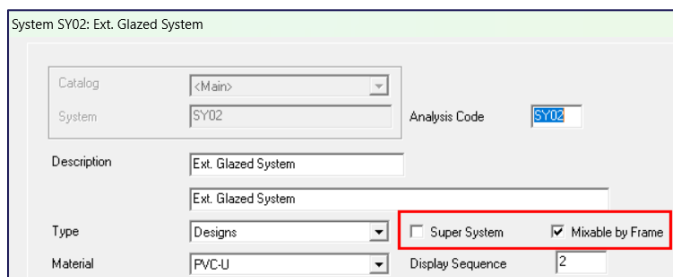

Mixable by Frame

Windowmaker now allows a System to support 'Mixable by Frame' options even if it is not a Super System. This needs to be set on the System Header page. Super Systems keep this flag on automatically.

Use the 'Mixable by Frame' flag on a System to allow creating multi-frame designs but using different option answers across frames e.g. with different opening types from the same system but have different profile choices.

Use the 'Super System' flag on a System to create a multi-frame design by combining multiple profile systems e.g. a casement door coupled with sliding windows.

Note: The program now generates an error if Super System is applied to a single frame design.

Custom Reports – Custom Field SQL Functions

Storage / Schema of Custom Fields (UDFs) in Windowmaker database has changed radically. Therefore, custom views, schemas, triggers, stored procedures, links etc. using custom fields need to be updated. New table valued functions have been added to fetch Custom Field values for Customer, Sales Header, Sales Line and Product as listed below.

- wm_fn_WMCustomerTableCustomFieldValueList
- wm_fn_WMProductTableCustomFieldValueList
- wm_fn_WMSalesLineTableCustomFieldValueList
- wm_fn_WMSalesHeaderTableCustomFieldValueList

Contact Windowmaker Help for more details.

Issues Fixed - Windowmaker

STK file output incomplete - 90476

STK file output generated for Site other "Home" (Site no. 1) was incomplete. This is now corrected.
